Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/542,784

Applicant(s)

LARSSON ET AL.

Examiner

Michael Szperka

Art Unit

1644

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 October 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 20-41 is/are pending in the application.
- 4a) Of the above claim(s) 25-38 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 20-24 and 39-41 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- ☐ Notice of Informal Patent Application
- ☐ Other: _____.

DETAILED ACTION

1. Applicant's response and amendments received October 24, 2007 are acknowledged.

Claims 1-19 have been canceled.

Claims 40 and 41 have been added.

Claims 20, 24, 28, and 39 have been amended.

Claims 20-41 are pending in the instant application.

Claims 25-38 stand withdrawn from consideration as being drawn to a nonelected invention. See 37 CFR 1.142(b) and MPEP § 821.03, for reasons of record set forth in the restriction requirement mailed February 7, 2007.

Claims 20-24 and 39-41 are under examination as they read on pharmaceutical compositions comprising IgY antibodies that bind *Enterobacter cloacae*.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 20-24 and 39 stand rejected and newly added claims 40 and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Colman et al. (WO 98/14209, of record) in view of Boccia et al. and in view of Carroll et al. (US Patent 5,599,539) for the reasons of record.

The office action mailed May 24, 2007 states:

Colman et al. teach compositions comprising avian antibodies (i.e. IgY) that are to be used to treat enteric infections in immunocompromised patients such as neonates (see entire document, particularly the abstract, lines 1-18 of page 2, and lines 6-32 of page 8). They disclose that passive immunization (i.e. administration of preformed antibodies to a patient) has been shown to protect individuals from neonatal necrotizing enterocolitis (see particularly lines 8-12 of page 6 and lines 24 and 25 of page 9). The avian antibodies are disclosed as being administered in a multitude of forms, including as part of a nutritional formula given to patients in an intensive care unit (see particularly pages 14 and 15, most particularly lines 28-30 of page 15). These teachings differ from the instant claimed invention in that Colman et al. do not disclose that their avian antibodies are specific for antigens found in *E. cloacae*.

Boccia et al. teach that necrotizing enterocolitis is one of the most serious gastrointestinal diseases among newborns, that it mainly affects newborns in intensive care units, and that *E. cloacae* is an important causative agents for this disease (see entire document, particularly the abstract and Table 3).

Carroll et al. teach that avian antibodies are to be mixed with infant formula for ease of administration to infants (see particularly lines 45-61 of column 3).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the instant invention was made to make a composition comprising IgY that is specific for *E. cloacae*. Motivation to do so comes from the teachings of Boccia et al. that *E. cloacae* is a major pathogen in neonatal intensive care units that causes necrotizing enterocolitis and the teachings of Colman et al. that antigen specific IgY is to be used to treat diseases such as neonatal necrotizing enterocolitis. A skilled artisan would have been further motivated to place the *E. cloacae* specific IgY antibodies into infant formula based on the teachings of Colman et al. that their antibodies are to be added to nutritional supplements given to intensive care patients and the teachings of Carroll et al. that IgY is to be added to infant formula for ease of administration to infants.

Applicant's arguments filed October 24, 2007 have been fully considered but they are not persuasive. Applicant's first argument is that the statements made by Coleman et al. concerning the absorption of IgY from the intestines and transport through the circulatory system are unsubstantiated.

This argument is not relevant because as disclosed by Boccia et al., *E. cloacae* causes enteric disease. Orally administered antibodies are delivered directly to the gastrointestinal tract which is the site of infection and thus there is no need for the antibodies to go elsewhere in the body. Passive immunization by administering antibodies, including IgY, to protect against enteric infection is well known in the art. See particularly lines 8-38 of Colman, as well as Yokoyama et al., Ikemori et al., Zuniga et al., Peralta et al., and note that many of these provided references were cited by

Colman et al.. As such the disclosed speculation concerning IgY absorption is not relevant and a person of ordinary skill in the art would expect that passively administered IgY antibodies protect against enteric infections.

Applicant's second argument is that Coleman was convicted of misdemeanors under the Food, Drug, and Cosmetic Act, and therefore no one would believe the disclosure of the WO 98/14209 publication by Colman et al.

This argument is not persuasive because the examiner need not consider actions taken in another judicial proceeding and jurisdiction with regard to patentability of the instant application under United States law. The criminal/civil procedures relied upon applicant has no relevance to determine of whether the same invention would have been obvious to one of ordinary skill in the art at the time the invention was made within the ambit of 35 USC 103(a). Further, based upon the prior art cited in the Colman et al. document, a person of ordinary skill in the art would definitely believe that enteric infections can be treated by passively administering IgY because this is precisely what has been demonstrated to work by other researchers as discussed above. Specifically, applicant states that there is "no substantiation for the allegation that avian antibodies can actually be used to treat enteric infections in immunocompromised patients." Note that in 1992 Yokoyama et al. disclosed "Passive Protective Effects of Chicken Egg Yolk Immunoglobulins Against Experimental Enterotoxigenic *Escherichia coli* Infection in Neonatal Piglets", that this work was cited by Coleman et al., and that neonates are immunocompromised (see particularly lines 9-17 of page 4 of the instant specification). Therefore it appears that applicant's statement concerning avian antibody efficacy is incorrect in view of the teachings of the prior art.

Applicant also argues that "Carroll teaches that avian clostridial antitoxin, not avian antibodies, can be mixed with infant formula for ease of administration to infants."

This argument is not persuasive because clostridial antitoxin is avian polyclonal antibodies. Applicant is invited to review the Description of the Invention found in columns 4 and 5 of Carroll et al. wherein it is disclosed that the antitoxin is made by immunizing chickens, as well as working Examples 1-7 of Carroll et al.

Note that new claims 40 and 41 have been joined to this rejection. Claim 41 is an exact duplicate of claim 24. Claim 40 recites that said nutritional agent is human breast milk or a substitute thereof, and infant formula is a substitute for breast milk. As such, the limitations recited in the new claims have been previously addressed in the rejection of record.

The rejection is maintained.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. The rejection of claims 24 and under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention for antecedent basis problems has been withdrawn in view of applicant's amendments to the claims received October 24, 2007 which correct the deficiencies discussed in the prior office action.

Claim Objections

6. The objection to claim 20 for lack of proper formatting of the scientific names of organisms, such as *Enterobacter cloacae*, has been withdrawn in view of applicant's claim amendments received October 24, 2007 which address this issue.

7. The following is a new objection necessitated by applicant's claim amendments received October 24, 2007.

8. Claim 41 is objected to under 37 CFR 1.75 as being a substantial duplicate of claim 24. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of

the allowed claim. See MPEP § 706.03(k). Note that in the instant case, the text of claim 24 and new claim 41 are identical and that no claims are allowable.

9. No claims are allowable.

10. Applicant's amendment necessitated the new ground of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

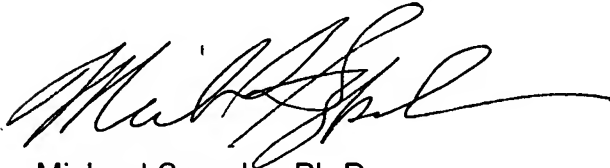

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Szperka whose telephone number is 571-272-2934. The examiner can normally be reached on M-F 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on 571-272-0841. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
